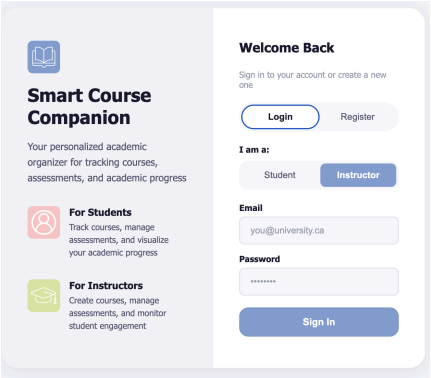
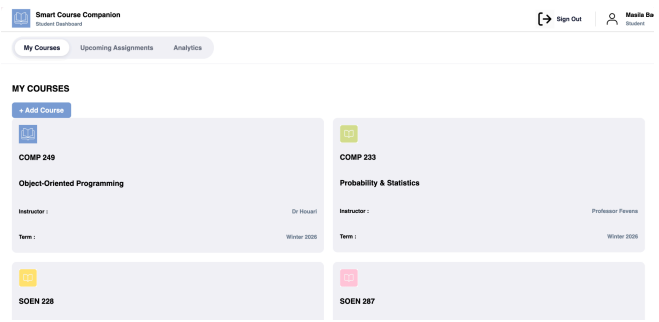
User guide

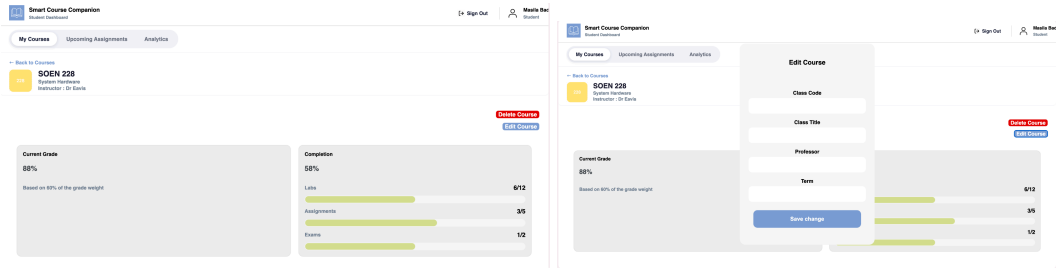


LOGIN&REGISTER PAGE: Choose your role and login or register for the first time

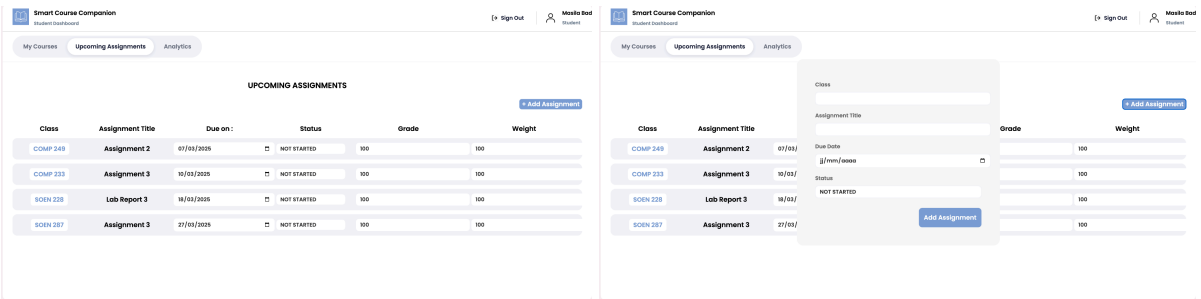
ROLE CHOSEN : STUDENT



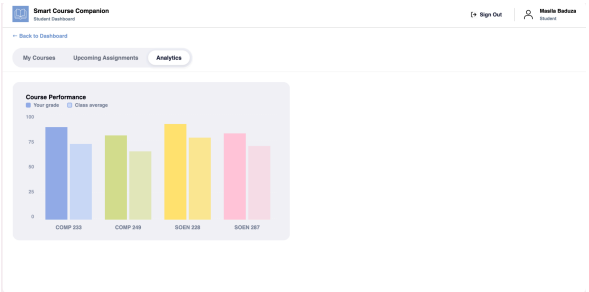
STUDENT DASHBOARD : Choose a class on the dashboard by clicking on a grey box or click on **+ Add course**



COURSE PAGE : You can look at the graphics or **Edit the course** or **Delete it**

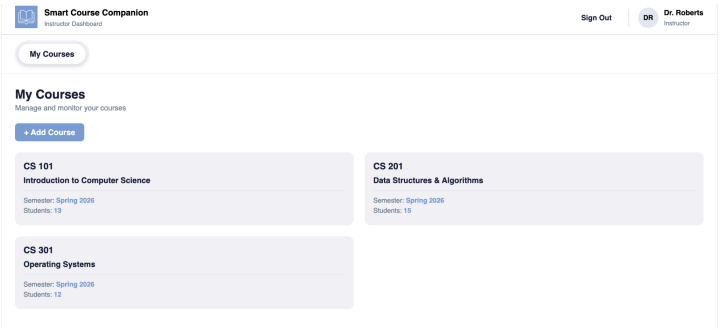


UPCOMING ASSIGNMENT : See and manage all your assignments, click on **+ Add Assignment** to fill the form and add a new assignment.

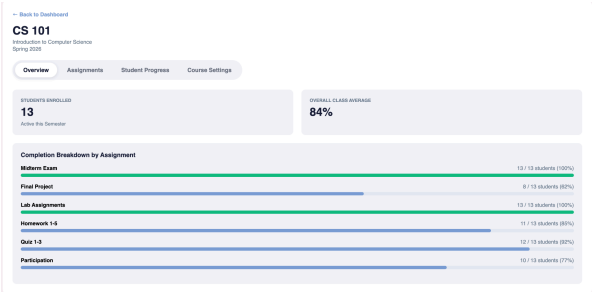


ANALYTICS PAGE : you can see your average vs the class average

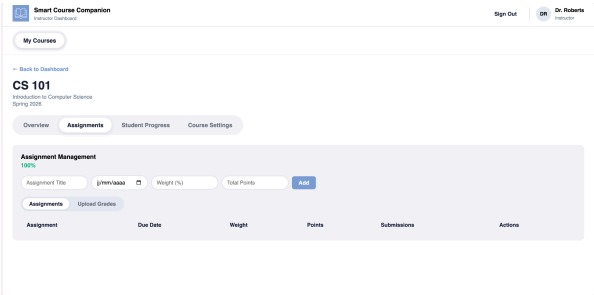
ROLE CHOSEN : INSTRUCTOR



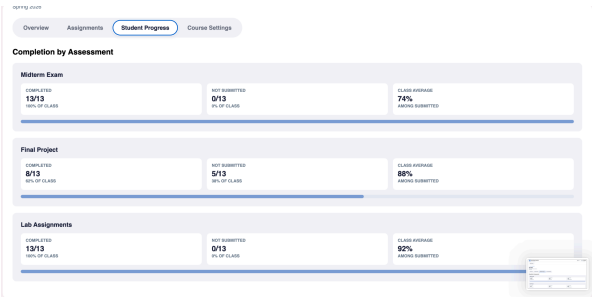
INSTRUCTOR DASHBOARD : Choose a class on the dashboard by clicking on a grey box or click on **+ Add course**



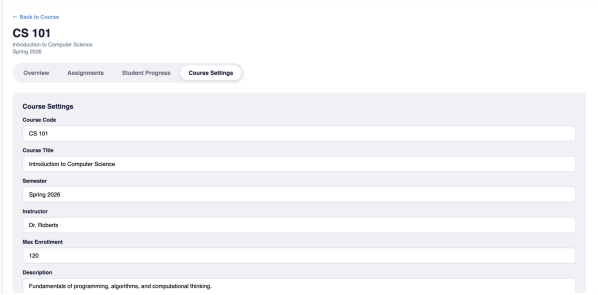
COURSE OVERVIEW : showing the number of students enrolled, the class average, and a completion breakdown by assignment displayed as progress bars.

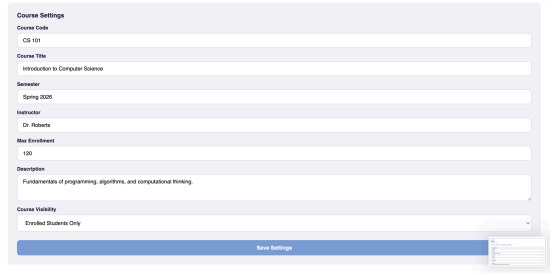


ASSIGNMENT PAGE : You can Upload Assignment and Grades by clicking on **Add**



Student Progress Page : displaying completion statistics and class averages per assessment.





COURSE SETTING PAGE : Course Settings form, that allow to change the course details (code, semester, title...)

How to install

How to install the Smart Course Companion Web-App :

What you need :

- Node.js installed
- MySQL installed
- A web browser

Step 1 – Download the project

Step 2 – Set up the database

Step 3 – Configure the connection

Step 4 – Install dependencies

Step 5 – Start the server

Step 6 - Open the app

List of all implemented features

List of All Features Implemented – Smart Course Companion

Authentication

- User registration and login page
- Role-based session management (Student vs. Instructor)
- Sign out button

Student Dashboard

- My Courses tab displaying all enrolled courses as cards (course code, title, instructor, term)
- Add Course functionality with a form
- Edit Course functionality (class code, title, professor, term)
- Delete Course functionality

Upcoming Assignments (Student)

- Table listing all upcoming assignments across all courses (class, title, due date, status, grade, weight)
- Add Assignment functionality with a modal form

Student Course Page

- Individual course page showing current grade and grade weight coverage
- Completion breakdown by category with progress bars

Analytics (Student)

- Bar chart comparing the student's grade vs. class average per course

Instructor Dashboard

- My Courses tab listing all courses taught by the instructor
- Course Overview tab showing total enrolled students and overall class average
- Completion breakdown by assignment with progress bars

Instructor Course Management

- Assignments tab with form to add new assignments (title, due date, weight, total points)
- Upload Grades toggle for grade entry
- Student Progress tab showing per-assessment completion rates and class averages
- Course Settings tab to edit course details (code, title, semester, instructor, max enrollment, description, visibility)

Backend

- Node.js + Express server (server.js)
- MySQL database connection (db.js, scc_db.sql)
- REST API routes for authentication, courses, assignments, and grades
- Authentication middleware for route protection

Teamwork Discussion Sheet Project

Concordia University	SOEN 287: Web Programming
Gina Cody School of Engineering and Computer Science	Winter 2026

Teamwork Discussion Sheet Project

Student name	Student ID	Items covered	Contribution on each item (%)	Overall Contribution on the deliverable (%)*	Signature
HOUNKPONOU Maélys	40323380	Though the database, make the tables and corrected the password Debugging adding some routes on the student side to make data protection	50% 30%	30%	MH
FLEURY Constance	40348933	Server, Node.js routes. DataBase connection, Calculation, data protection. Debugging	80%	40%	CF
BLACK-JOHNSON Markayla	40131616			0%	
THAVARAJAH Thushika	27516126	CRUD operations	50% 30%	30%	TT

** The sum of ratios in this column should sum to 100%*

Discussion:

Please write a small paragraph discussing teamwork (who did what, how much, was the work allocation fair, did each member respect commitments and deadlines...).

Structure:

For this deliverable, the team divided into two subgroups to work in parallel. Maëlys and Thushika took ownership of the SQL side — designing the database schema, creating the tables in phpMyAdmin, populating them with seed data, and compiling the SQL queries for the routes in sql_queries_for_routes.sql. Constance and Markayla focused on the Node.js side, building out the Express application, setting up the server and database connection, and implementing the authentication and data routes. That said, the division was not entirely strict — since the CRUD operations and data routes sit at the intersection of both SQL and Node.js, Thushika and Maëlys were also involved in contributing to and validating parts of the route logic.

Time commitments and deadlines:

Communication proved more challenging than in previous one. Midway through the work period, the team faced a significant setback when Markayla fell ill and became unreachable for a period of time, which created uncertainty around the Node.js components she was responsible for. This required the remaining members to adapt and pick up the slack where possible to keep the project on track. Despite these difficulties, all team members ultimately met the deadline, and the final product reflects the effort each person put in under the circumstances.
